BULBS, HARDY PERENNIALS,
PLANTS

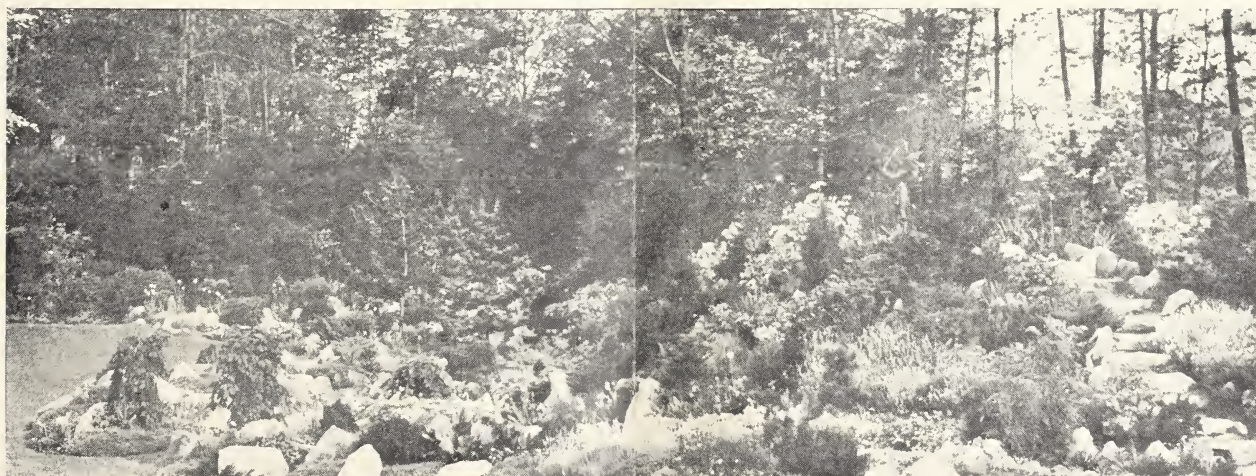

GREENHURST, NEW YORK

Giant-Flowering Montbretias

These charming flowers grow from bulbs or corms in the manner of gladiolus. The plants are exceedingly graceful, and the branching flower-spikes rise two or three feet above the lower leaves. The flowers are lily-shaped starry bells rioting in shades of yellow, orange, and scarlet. They are unexcelled for cutting and blend well with other blooms and foliage. Montbretias thrive under the same simple treatment as gladiolus. Plant them outdoors from late March until May, in a sunny border, fertilizing the ground liberally, and cultivating them frequently to encourage vigorous growth. The bulbs or corms should be set four or six inches apart and three inches deep. They can be lifted in autumn, dried off, and stored over winter like gladiolus, but in sheltered gardens they may be left in the ground over winter under a light mulch and will be generally the better for it.

	Each	Doz.	100
Aurea. Yellow.....	\$0 05	\$0 50	\$4 00
Crocsmæflora. Orange-red	05	40	3 00
